

Datatex textile ERP directions

The power of information technology at the service of the textile industry

Technological innovation is the key to meeting the challenges of the market

Datatex is an international company specializing in the design, development and implementation of ERP for the textile and apparel industry.

Founded in 1987, **Datatex** brought together the expertise of a leading group of textile management consultants and an established software house with extensive experience in developing ERP solutions.

The resulting mix of strategic skills, industry knowledge and technological know-how has led to the company's current success in world markets.

Datatex provides software solutions for textile industries of all kinds, from vertically integrated companies requiring systems to cover the entire production cycle to those specializing in a single stage of the production process.

*The **Datatex** mission:
optimizing Business management
systems for the textile industry.*

Constant product innovation, excellence in working practice, wide availability of resources and services, together with careful attention to the methods and management style of each customer, are the foundations on which **Datatex** has built its success.

The facts speak for themselves:

today there are over 400 implementations of **Datatex** ERP for textile and apparel in 42 countries in 14 different languages. Its customers include some of the world's largest and most important textile manufacturers. No other solution provider has such a large installed base of software solutions the textile and apparel industry.

Specialization: a strategic advantage

Full understanding of the industry's needs is the key to delivering effective textile ERP.

*The **Datatex** approach is based on specialist industry know-how in continuous evolution.*

The textile industry has very special needs. Textile companies have different levels of vertical integration and a variety of manufacturing processes and therefore management requirements.

Textile ERP is where **Datatex** has chosen to specialize.

Datatex textile ERP brings together extensive knowledge of the way the industry works and the latest information management technologies and methodologies.

Unlike other providers of enterprise IT systems, **Datatex** speaks the same language as its customers. This allows **Datatex** to rapidly assimilate customer working practices and approach and translate them into powerful, effective resource management systems.

Datatex customers are the first to appreciate this unique legacy of specialist know-how that gives **Datatex textile ERP** a substantial edge over those produced by non-specialist competitors, however impressive their market share or their track record is in other sectors.

Datatex has a vast experience in dealing with the problems and requirements of the textile industry. **Datatex ERP for textile and apparel** is created to meet the real needs of each application without unnecessary technological sophistication.

Datatex textile software

An integrated approach to enterprise management

Datatex software provide all levels of management instruments for the total textile supply chain..

Flexibility and rapid response are essential qualities for any successful textile business. Achieving them requires dynamic management of the entire organization.

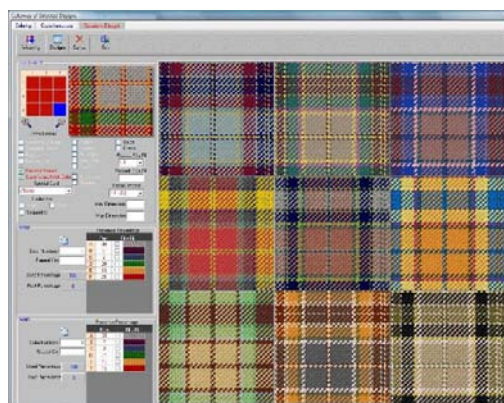

Building on over 20 years experience in the textile industry **datatex** has created an **ERP** (Enterprise Resource Planning) for **textile and apparel** based on a proven yet rapid and innovative approach to system development.

Datatex textile software is a distributed, network-oriented application, e-business-ready with full facilities for Supply Chain Management (SCM), designed for technological enhancements.

Purpose-designed with the needs of the textile and apparel industry in mind, **Datatex ERP textile** introduces new levels of integration and information availability across the whole production cycle. outsourcing.

Datatex textile software maintains the benefits of a standard package with a high level of adaptability, ensuring that the solution can be tailored to almost any requirement. Its modular and table-driven structure allows it to be configured to the needs of any textile business, whatever its size..

Datatex textile ERP interfaces easily with standard accounting and financial packages. Where necessary, it can be integrated with CAD/CAM and shopfloor monitoring systems.

Datatex textile ERP framework

COMPANY KNOW-HOW IS AN ASSET FOR ALL, NOT JUST A FEW

*With the **Datatex** software, textile industry managers have a method for making key tactical and strategic decisions.*

Datatex textile software provides a framework within which textile industries can organize their business and manufacturing know-how to create a vital management resource. Of course industry decision makers have to have rapid access to company data, but the most pressing need is to have answers to critical questions such as "What happens if...?", "How can we...?".

It is here that **Datatex textile ERP** demonstrates its superiority as a business intelligence tool.

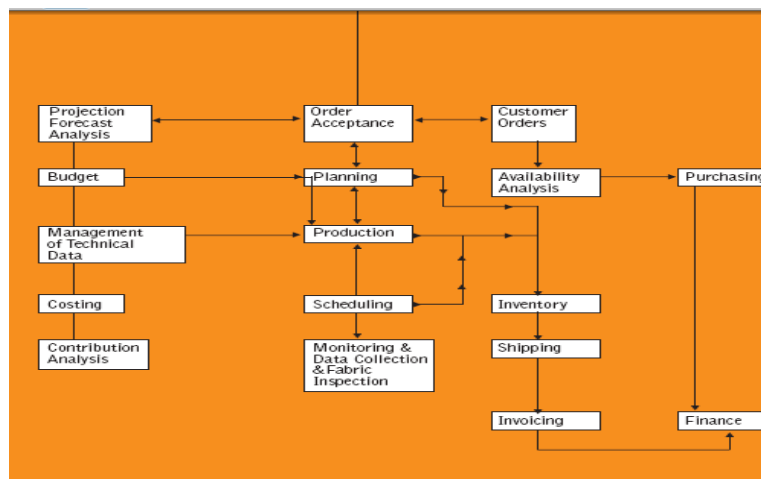

Modular in structure, **Datatex textile ERP** provides a user-friendly customizable environment that can be tailored to the needs of each user. This modular structure makes it an ideal solution for businesses both large and small.

Datatex textile software can be progressively expanded, both in the "horizontal" sense to embrace additional organizational functions, as well as "vertically" to integrate other stages of the production process.

There is no such thing as a **Datatex textile ERP** for spinning processes or a **Datatex textile ERP** for weaving. There is a single **Datatex ERP** environment for textile and apparel, which, due to its high flexibility and expandability, can be adapted to a vast range of industry requirements. Whatever the area, users work through a single, common interface.

Datatex textile ERP consists of the following integrated functional modules:

- **Sales**, for order acceptance handling, shipping and invoicing,
- **Planning**, for the optimizing and scheduling of production orders,
- **Manufacturing**, for the management of the production cycle, including dye house management and quality control,
- **Inventory & Purchasing**, for the optimization of reordering, stock and valuation policies,
- **Costing**, for the monitoring and control of standard and actual costs,
- **Database**, used to store corporate information and operating standards.

Customer service: a fundamental right

From commitment to practice

*The main objective:
total customer satisfaction.*

Rapid, effective customer service and consulting services are considered by **Datatex** to be fundamental rights of the customer. For this reason **Datatex** provides a wide range of services to its customer base:

- Design and implementation of ERP textile, from functional analysis to installation
- Organizational and management consulting services for each company function
- Systems and applications service to customize each individual solution
- Maintenance and service operations in real time over the Internet with significant cost reductions
- Training for users of **Datatex textile ERP** applications.

Datatex guarantees the continuous development of the **Datatex textile ERP** environment through the periodic release of new versions, including new functions and features to take advantage of the most recent developments in hardware. The customer's investment is protected by upgrades that integrate seamlessly into the existing solution maintaining all customized features and functions of the previous installation.

The ownership of a **Datatex textile ERP** solution represents a real investment by leaving users free to concentrate on the core business without having to concern themselves with system design development and upgrading with its associated costs.

Delivering value - globally

A worldwide presence provides local access to innovation

Datatex has a worldwide presence, both through its own offices, as well as through its sales network of leading software houses providing highly qualified, timely customer service and product competency at local level.

Being a global company is of strategic importance for the evolution of **Datatex textile ERP**, as well as bringing important benefits for all its customers. In fact, when introducing new features or functions, **Datatex** thinks globally, taking into account not only the needs of the local customers who requested the modification, but tailors them to the needs of other **Datatex textile ERP** users throughout the world.

Datatex products are the fruit of a global vision of textile industry development.

For this reason **Datatex textile software** is often able to anticipate the needs of a customer because the very same requirements have already been satisfied elsewhere. This process of global updating has powerful benefits for all users of **Datatex textile ERP** throughout the world.

In a period when the textile industry is experiencing new levels of logistical complexity due to the decentralizing of manufacturing processes, often overseas, the international standardization offered by **Datatex** is increasingly important.
