

New planning module

NOW release 3.0.0 is now available with many new features in additions to the new planning module.

Planning is now available by unique order thread. Planning across orders is then available too. In all cases maintaining production to order where required and considering available stock to net-off and safety stock levels. Planning by discrete groups is also available often used by the garment industry. World class MRP with its textile uniqueness is a standard NOW feature in addition to the newly added on line capacity analysis.

Needless to say these planning functions automatically create production demands and purchasing requisitions and are all fully available in the scheduling environment to be scheduled when the time comes.

we make **IT** work for you
